

HID® Mercury™ LP2500 Intelligent Controller

Master intelligent controller
(no onboard I/O)

The HID Mercury LP Series Intelligent Controllers are HID Global's next generation advanced access control platform that runs on embedded Linux. The enhanced platform offers an improved processor and increased memory, plus feature an embedded crypto memory chip that provides a secured layer of encryption to onboard sensitive data. Built on the HID Mercury open platform, LP Series controllers provide the necessary flexibility for OEMs, channel partners and end customers to choose the controller configuration that best fits their needs.

The LP2500 is a powerful intelligent controller with native network support and is scalable to 64 doors/openings. Built on the HID Mercury platform, the intelligent controller uses an on-board Ethernet port to connect to cloud or server based access control hosts. The intelligent controller performs access control, alarm management and scheduled operations— all in a single package.

Capable of elaborate processes and procedures without host intervention, the intelligent controller, once programmed, can function independently of the host. System configuration and setup are provided through HID OEM partner software applications.

For partners seeking a comprehensive and open access control platform, increased user capacity, and a reliable hardware platform running an expanded set of applications, the LP2500 is the clear solution. It delivers a complete security and access control solution as well as innovative application extensions, interoperability and data security.

KEY BENEFITS:

- Open Architecture – High performance, reliable platform enables use of hardware with HID Mercury OEM partners' software solutions.
- Enhanced Security – Embedded crypto memory chip and data at rest encryption provides secured layer of protection of sensitive data.
- OSDP Protocol – Secure channel communications for reader connectivity.
- Versatile Interoperability – Same reliable interface and identical footprint as the EP Controllers, enabling seamless upgrades for existing deployments.
