

Brand Partners Products

31ST ANNUAL LEADERSHIP CONFERENCE

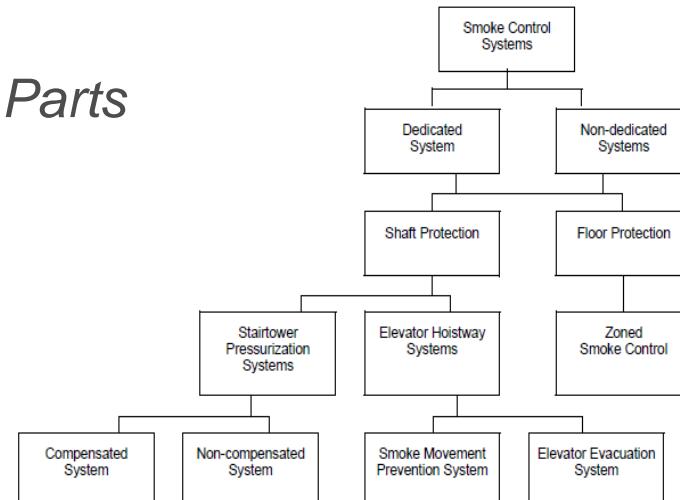

WELCOME

Strong on Smoke Control

Jerry Harris

Course Outline – Basics and Estimating

- ❖ *Applicable Codes*
- ❖ *Definitions*
- ❖ *Which Notifier panels are acceptable?*
- ❖ *Smoke Control Panel – Estimating Parts*

Course Outline – Super-Tech Section

- ❖ *New Programming features v.21 and up*
 - ❖ *Organizing your data*
 - ❖ *Example 1 – Zoned Pressurization and Exhaust*
 - ❖ *Example 2 – Networked + Zoned = Proof of Concept*

Applicable Codes – Latching Lockout

- ❖ References from the 2015 Edition of NFPA 92
 - 6.4.4.1.2* - Lockout
 - 6.4.4.1.3* - Additional Zones (only Heat)
- ❖ International Building Code 909
 - 909.12 - preprogrammed weekly test sequence
 - 909.16 – required indications (white LED)

Dedicated or Non-Dedicated (per SCS Manual)

❖ Dedicated System

- A smoke control system designed for the sole purpose of controlling smoke within a building.
 - ❖ In this case, equipment is **not** linked to building HVAC controls.
 - ❖ This is accomplished by forming a system of air movement that is separate and distinct from the building's HVAC system and only operates to control smoke.

❖ Non-Dedicated System

- A smoke control system that shares components with other air moving equipment. When the smoke control mode is activated, the operating of the building's air moving equipment changes in order to accomplish the objectives of the smoke control design.

Smoke Control Definitions

❖ Pressurization

- Pressurization is employed by creating pressure differences across partitions that separate the smoke zone from other areas. This can be accomplished by making pressure in the area surrounding the smoke zone higher than pressure in the smoke zone itself (refer to Figure 2.4). Airflow through construction and door cracks prevents the movement of smoke to the high-pressure side. The pressure difference must be sufficient to contain the smoke in the smoke zone and at the same time allow doors leading to exit routes to be opened.

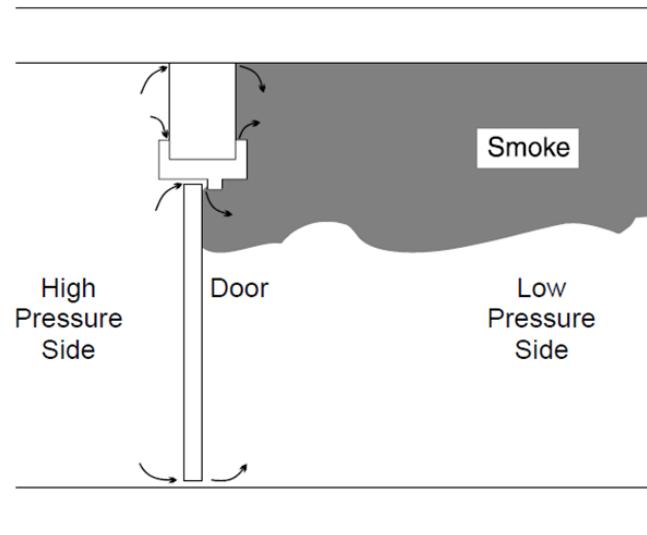

Figure 2.4 Pressurization

Smoke Control Definitions

❖ Smoke Purge / Exhaust / Evacuation

- Smoke that has entered a protected space can be purged or diluted by supplying outside air to the space. Purging is employed through the use of an exhaust inlet, usually located near the ceiling, and a supply outlet, usually located near the floor. The supply and exhaust points must be placed far enough apart to prevent the supply air from blowing directly into the exhaust. If the supply and exhaust points are placed too close, the purging operation will not function properly.
- While the process of purging is not an acceptable method of smoke control on its own, it can be used as a supplement to airflow or pressurization.

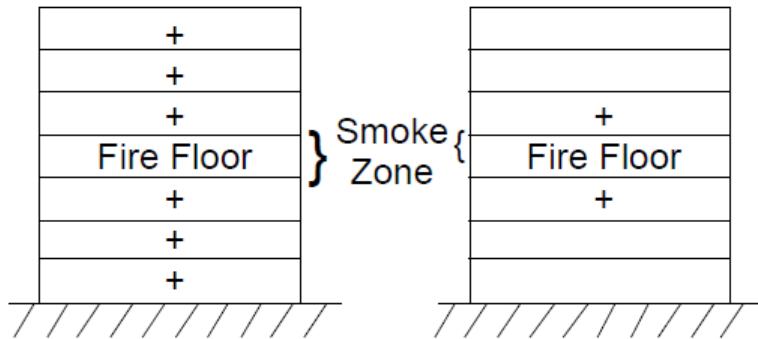

Smoke Control Definitions

❖ Zoned Smoke Control Systems

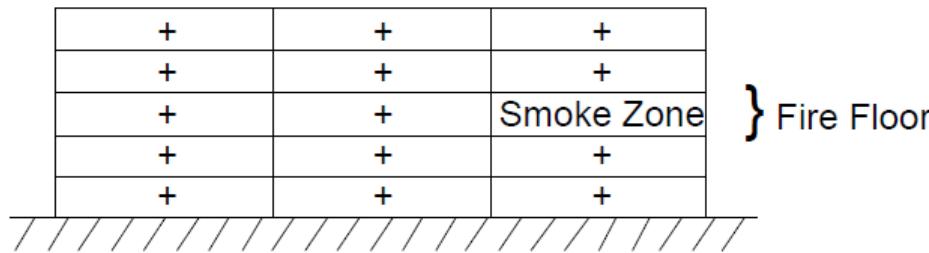

- Buildings can usually be divided into a number of smoke control zones where each zone can be separated from the smoke zone to prevent the movement of smoke.
- The smoke control zone boundaries are usually partitions, floors, and doors that can be closed. Often each floor of a building is chosen as a smoke control zone boundary.
- However, a smoke control zone can consist of more than one floor, or a floor can contain more than one zone. Also, all non-smoke zones can be pressurized, or just those surrounding the smoke zone.

Smoke Control Definitions – Examples

Smoke Control Zone Every Floor

Three Smoke Control Zones Per Floor

Smoke Control Definitions - Examples

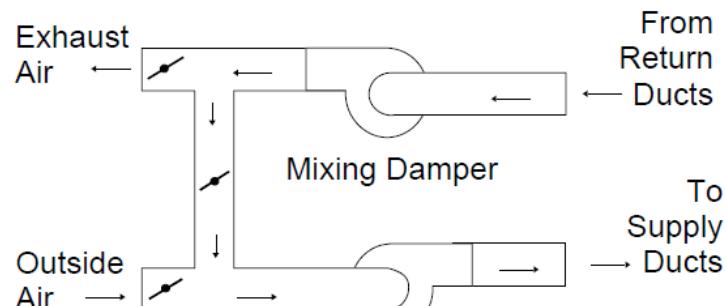

Figure 2.22a Normal Mode

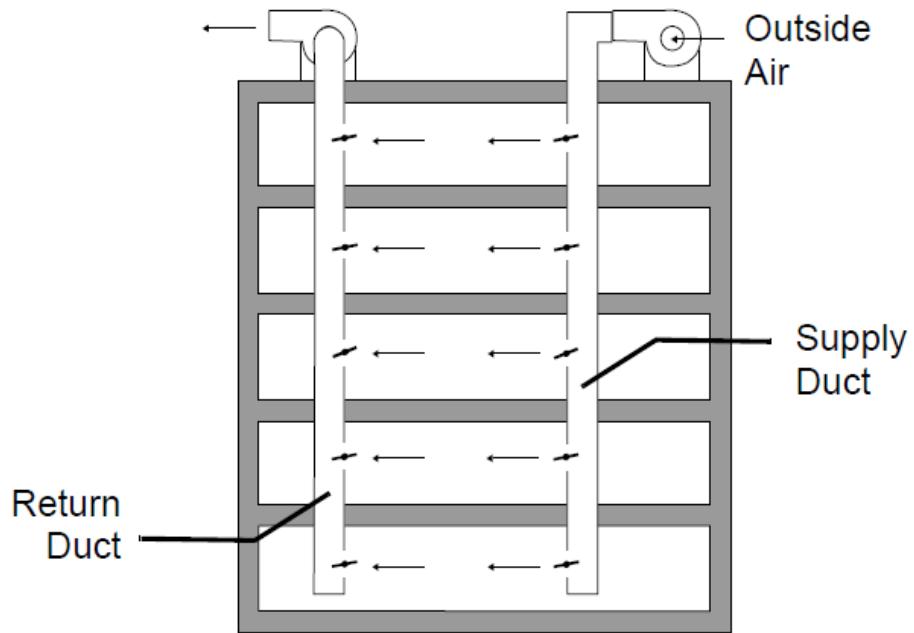

Figure 2.21a

Smoke Control Definitions - Examples

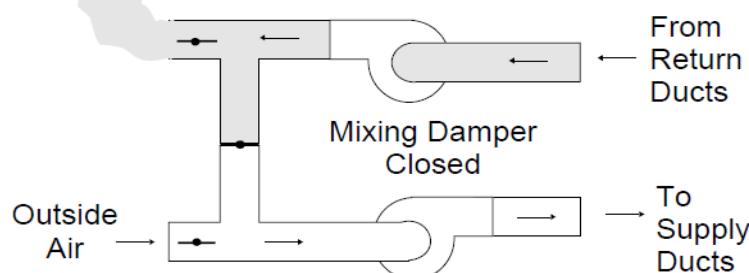

Figure 2.22b Smoke Control Mode

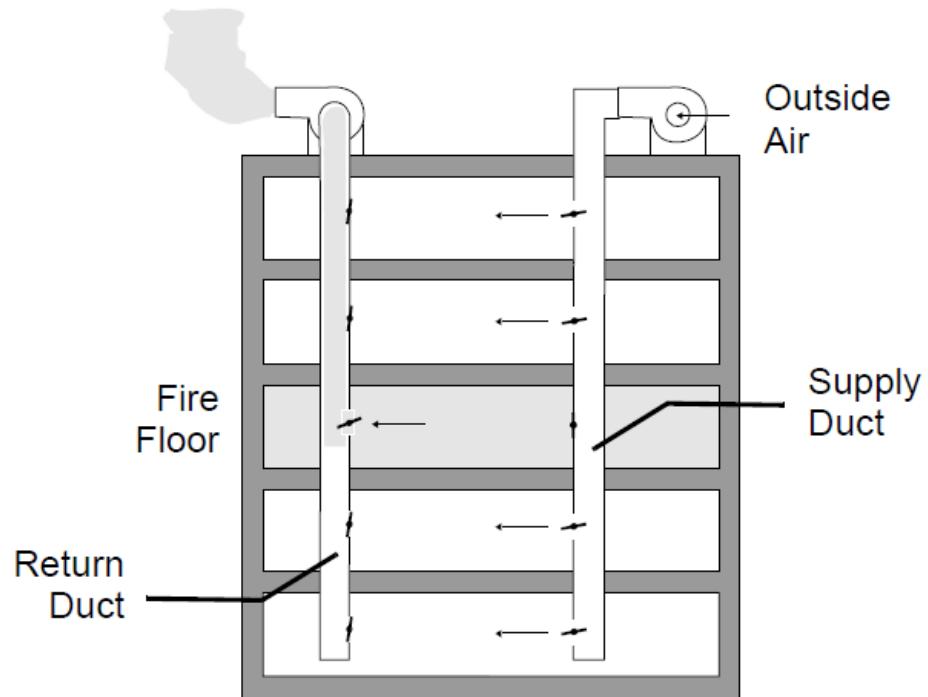

Figure 2.21b

Notifier Panels with Smoke Control Capability

Regardless of panel selection, the SCS Series boards must be included for UUKL applications

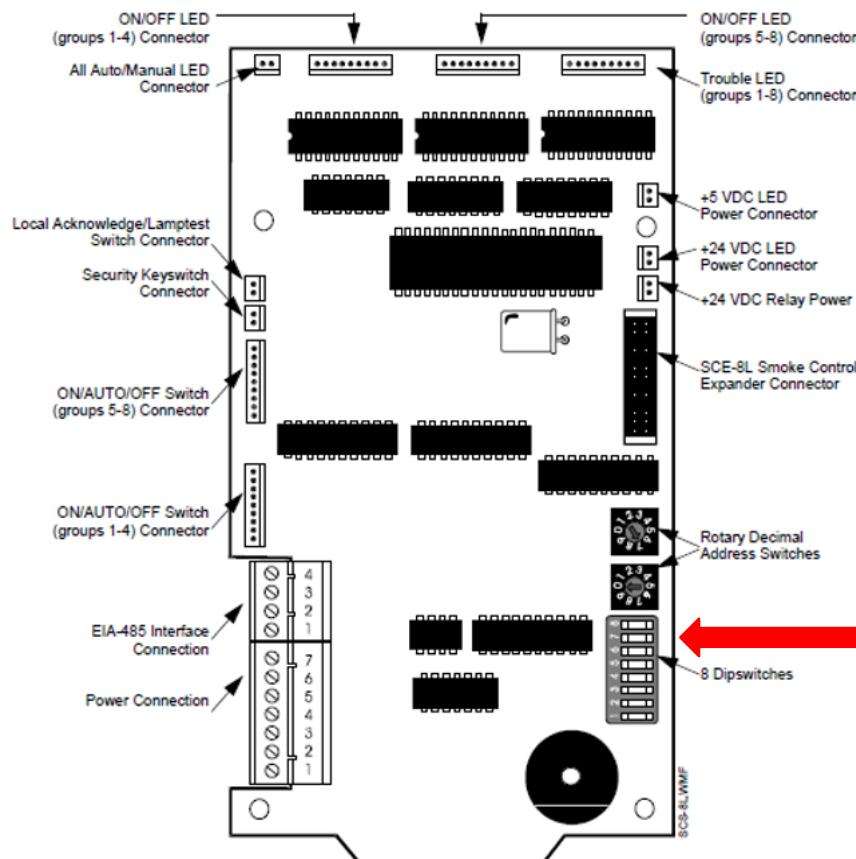

- ❖ ONYX Series

- NFS2-3030
 - NCA-2

Must have NFS2-3030 v.21 or higher for Complex Zoned systems

Smoke Control Panel - Interface Cards

- SCS-8L
 - SCE-8L (Expander Card)

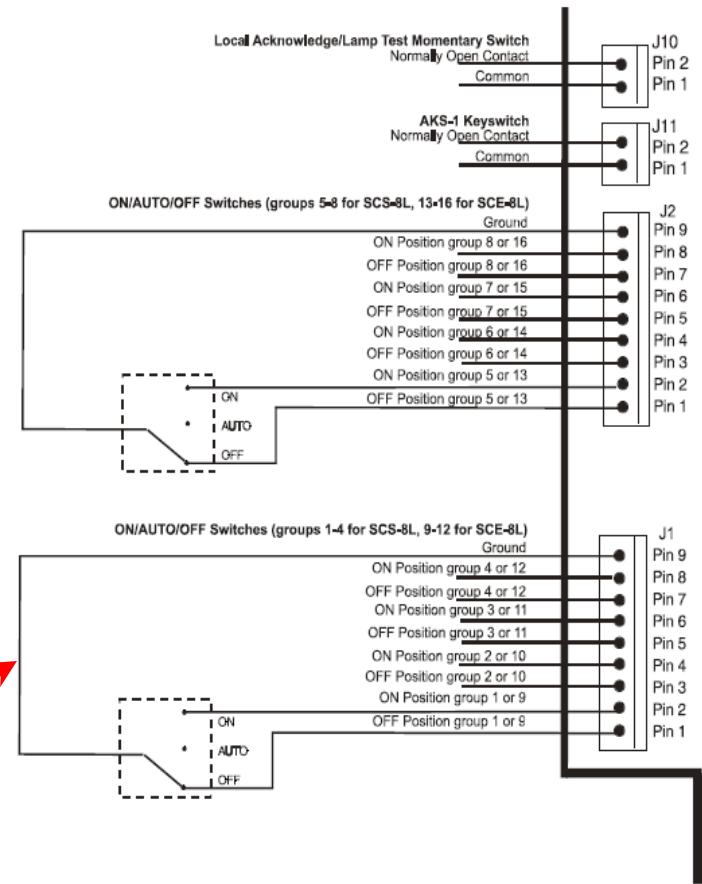

**FOR SETTING
MODES OF
OPERATION –
MUST MATCH
PROGRAM**

Smoke Control Panel - Interface Cards (Switches)

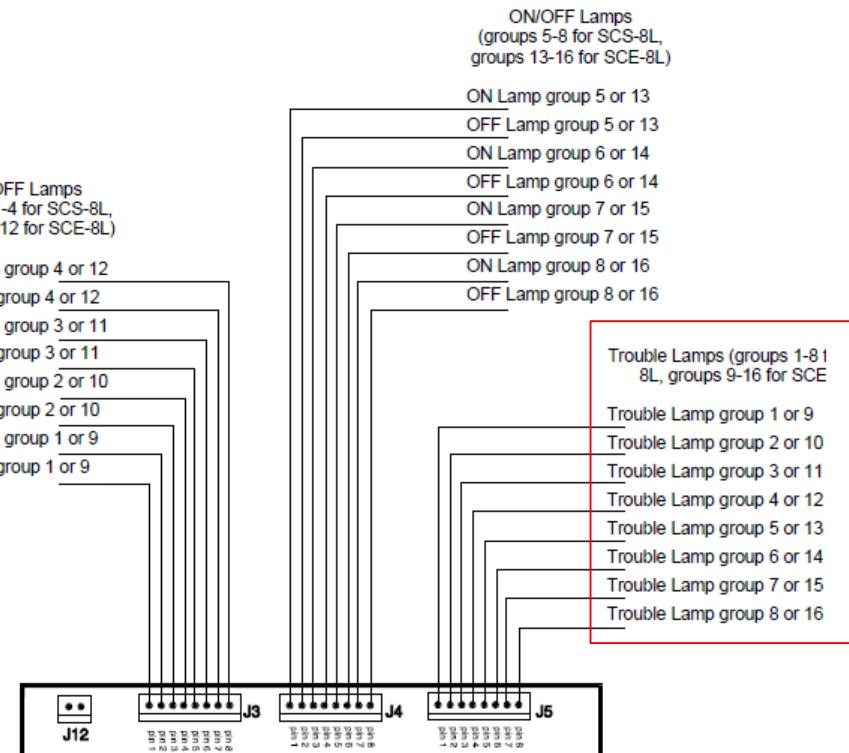

- ❖ Monitors eight (8) 3-position switches
 - ON, AUTO (null), OFF
 - Switch inputs 1-4 share a ground
 - Switch inputs 5-8 share a ground
- ❖ Monitors one (1) N.O. contact for lamp-test /Acknowledge
- ❖ Monitors one (1) N.O. contact for enable/disable all switch inputs

What happens if you break this wire?

Smoke Control Panel - Interface Cards (LED Outputs)

- ❖ Provides 24 LED drivers
 - For eight switches
 - On (green), Off (red), and Trouble (yellow)
 - On & Off drivers are grouped by switch
 - Trouble drivers only provide pre-programmed fault/trouble output
 - (not user programmable)
 - **Note:** LDM card outputs are programmable

Smoke Control Panel - Interface Cards

❖ Software options

- “B” = Boston
- Upgrade to 4.0 or higher chips if you have v.21 or higher CPU (c. 2015)

Where most projects fall

Table 3.2 SCS Features: V2.84 vs V4.0

Panel Feature (V21.0)	FSCS Mode A**		FSCS Mode B**
	SCS-8/8L V2.84	SCS-8/8L V4.0	SCS-8/8L V4.0
Independent Switch-group Operation (See Appendix C.2, "Mode B Operation")	No	No	Yes
Multiple Smoke Control Station	No	Yes	Yes
Pairing	No	Yes	No
Programmable Trouble Timer*	No	Yes	Yes
SCS Logic Equation Operators*	No	Yes	Yes
Enhanced Trouble Reporting*	No	Yes	Yes

*See NFS2-3030/NCA-2 documentation.
**See NFS2-3030/NCA-2 documentation for mode setting.

Smoke Control Panel - Interface Cards (Switches)

WATCH OUT FOR THIS!

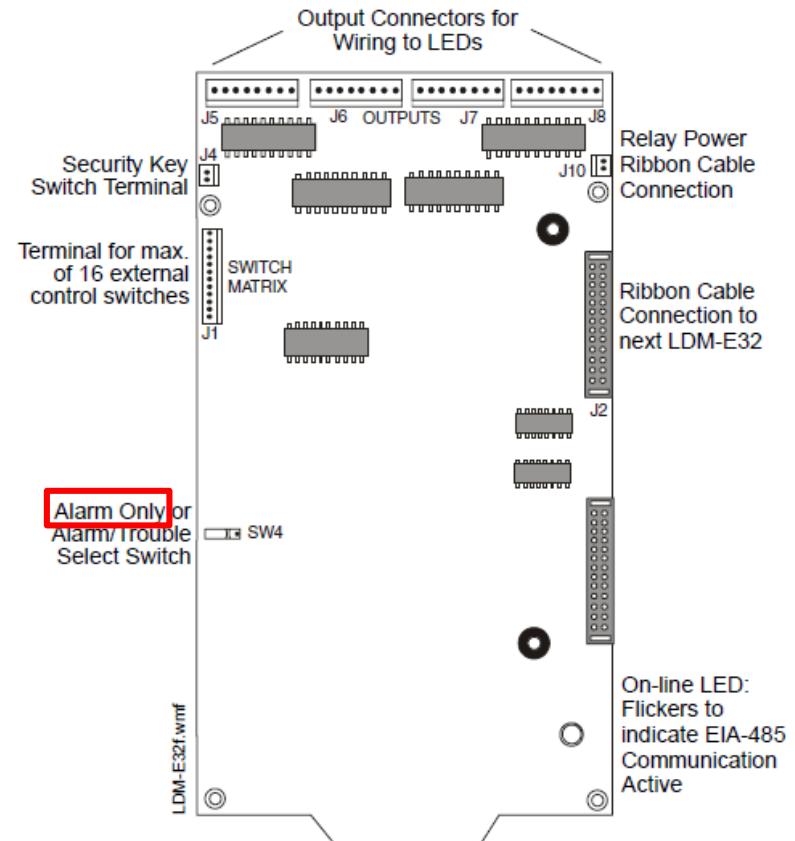

- ❖ Special application
 - 2 modes = 2 SCS switches
 - ❖ Custom wiring and switch
- ❖ Think about conflicts
 - Can the two modes be active at the same time?
 - How do we force the opposing mode off in this scenario?
- ❖ Needs to be coordinated closely with graphic manufacturer or it will likely arrive wrong.

Smoke Control Panel - Interface Cards (LED's)

- ❖ LDM-32 (Alarm Only mode)
 - LDM-E32 (Expander Card)
 - 32 fully programmable LED Drivers
 - ❖ 64 with LDM-E32 expander
- (Maximum of 1 expander per LDM-32)
- Used for
 - ❖ Normal LED (White)
 - ❖ Trouble/Fault LED (Yellow)

Smoke Control Panel – Identify your Equipment

- ❖ How many....

- Dedicated Fans (typically 1 Relay, 1 Monitor)
 - ❖ Only turn on for smoke control mode
- Non-Dedicated Fans (typically 2 Relay, 1 Monitor)
 - ❖ Controlled by BMS when not in smoke control mode
- Dedicated Dampers (typically 1 Relay, 2 Monitor)
 - ❖ Only Open/Close in smoke control mode
- Non-Dedicated Dampers (typically 2 Relay, 2 Monitor)
 - ❖ Controlled by BMS when not in smoke control mode

**Avoid mixing different equipment on the same SCS
(or paired SCS boards)**

Smoke Control Panel – Identify your Equipment

❖ What about complex zoned smoke control?

- Treat as switch group type 8 or 9 FSCS
 - ❖ Group Type 8 = 2 Control – 1 Monitor (On)
 - ❖ Group Type 9 = 2 Control – 2 Monitors
- Use NFS2-3030 General Zones for Control On and Control Off
- Use Logic Zones for Monitor On (and Monitor Off - if required)
 - ❖ When Group Type 8 is used, OFF status is assumed when not ON

Smoke Control Panel Interface Cards – Estimating SCS

Note: THIS ONLY APPLIES TO STANDARD 3 POSITION ON-AUTO-OFF SWITCH CONFIGURATIONS.

- ❖ To determine the quantity of SCS boards:
 - # of (a) Dedicated Fans requiring manual control (only operate in alarm)
 - Divide by 8 switches per SCS (and round up)= total cards
 - Divide by 2 (and round up) for total SCS-8L cards
 - Subtract the # of total cards from the number of SCS-8L cards for the number of SCE-8L cards

Example -

17 dedicated fans / 8 = 2.125 or 3 total cards,

3 total cards / 2 = 1.5 or 2 SCS-8L cards

3 total cards – 2 SCS-8L cards = 1 SCE-8L card

- ❖ Follow the same process for (b) non-dedicated fans, (c) dedicated dampers, (d) non-dedicated dampers, and (e) zones of equipment to be controlled

Smoke Control Panel Interface Cards – Estimating LDM

To determine the quantity of LDM boards:

- ❖ Count total LEDs required for the graphic
 - Subtract two LEDs for each manual switch required above
(ON/OPEN and OFF/CLOSED included with SCS)
 - Divide by 32 for total cards
 - Divide by 2 for LDM-32 cards
 - Subtract the total LDM-32 cards from the Total cards for the number of LDM-E32 cards

Example -

88 LEDs required – (10 switches x 2 = 20) = 68 LEDs

68 LEDs / 32 = 2.125 or 3 total cards

3 total cards / 2 = 1.5 or 2 LDM-32 cards

3 Total cards – 2 LDM-32 cards = 1 LDM-E32 card

5 Minute Water-Cooler Break and Questions

(The course will soon become more complicated - Now is your chance to ask your questions and then escape 😊)

Smoke Control - New Programming Features of v.21

- ❖ SCS Pairing
- ❖ Multiple Command Stations
- ❖ Programming Enhancements
 - Zone Precedence
- ❖ Read Status Enhancements
- ❖ Trouble Reporting Enhancements
- ❖ History Printout Enhancements

Smoke Control - New Programming Features of v.21

❖ SCS Pairing

- Pairing (SCS Mode A) allows SCS modules to be “grouped” so that more than one FSCS module will act as a single FSCS module (in regards to activation and lockout).
- All paired FSCS modules will enter manual mode when any toggle switch is used to enter manual mode.
 - ❖ Paired modules must be configured for FSCS mode.
 - ❖ For CBE lockout, program points 65-96 on the first FSCS module only.

Smoke Control - New Programming Features of v.21

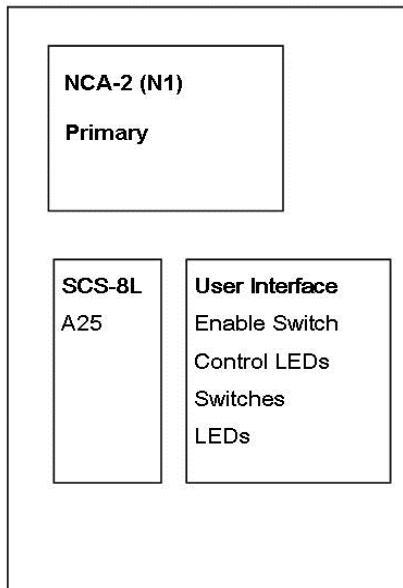

❖ AUTO, NORM, SCSDIS Operators

- AUTO
 - ❖ OR(AUTO(A1)) ← active when all switches on SCS address A1 are in their AUTO position
 - ❖ OR(AUTO(A1G2)) ← active when the 2nd switch on SCS address A1 is in the AUTO position
- NORM
 - ❖ OR(NORM(A1)) ← active when all switches on SCS address A1 are not in a fault condition
 - ❖ OR(NORM(A1G2)) ← active when the 2nd switch on SCS address A1 is not in a fault condition
- SCSDIS
 - ❖ OR(SCSDIS(A1)) ← active when the enable key-switch contacts on SCS address A1 is shorted

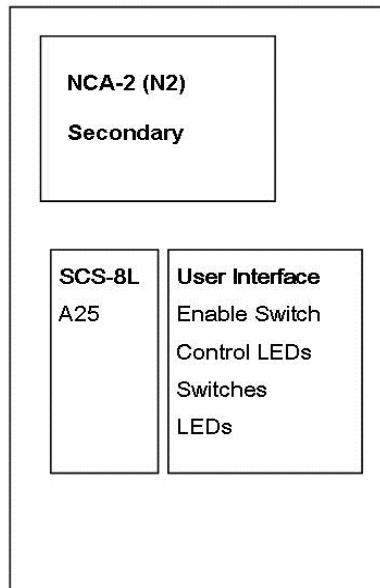

Smoke Control - New Programming Features of v.21

❖ Multiple Smoke Control Stations (MSCS)

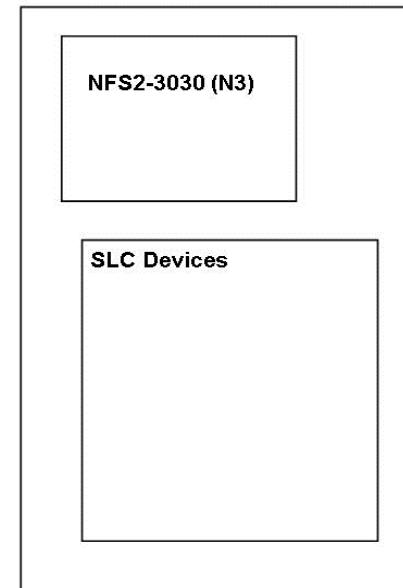

- Provides the ability to choose to control from multiple duplicate interface panels

Primary Panel—
Normally in Control—
Enabled.

Secondary Panel—
Highest Priority—
Normally Disabled

Smoke Control - New Programming Features of v.21

- ❖ Multiple Smoke Control Stations (MSCS) continued....
 - Primary Panel - Normally in Control

Programming	Visual Indicators	Notes
ZL498 = OR(SCSDIS(A25),NOT(N2ZL498))	Primary SCS Disabled	ZL498 will be active when the primary's enable/disable switch is disabled and the secondary NCA-2 SCS is enabled/disabled.
ZL499 = OR(AUTO(A25))	--	Required for Multiple Smoke Control Systems applications; monitors the Auto status of the SCS-8L (designated as A25 in this example). Logic zone address must be lower than that of the MSCS Control Zone.
ZL500 = AND(NOT(SCSDIS(A25)),NOT(N2ZL500))	Primary SCS Active	ZL500 identifies the MSCS Control Zone of the primary NCA-2. This logic zone will be active when the primary's enable/disable switch is enabled and the secondary NCA-2 SCS-8L is disabled.
ZL501 = AND(ZL499,N2ZL499)	--	Required to track when the SCS-8L is in Auto; Must use the next consecutive logic zone address after the MSCS Control Zone of the primary NCA-2.
N2ZL500	Secondary SCS Active	N2ZL500 identifies the MSCS Control Zone of the secondary NCA-2.

Smoke Control - New Programming Features of v.21

- ❖ Multiple Smoke Control Stations (MSCS) continued
 - Secondary Panel – Normally disabled

Programming	Visual Indicators	Notes
ZL498 = OR(SCSDIS(A25))	Secondary SCS Disabled	ZL498 will be active when the secondary's enable/disable switch is disabled.
ZL499 = OR(AUTO(A25))	--	Required for Multiple Smoke Control Systems applications; monitors the Auto status of the SCS-8L (designated as A25 in this example). Address must be lower than that of the MSCS Control Zone.
ZL500 = NOT(SCSDIS(A25))	Secondary SCS Active	ZL500 Identifies the MSCS Control Zone of the secondary NCA-2. This logic zone will be active when the secondary's enable/disable switch is enabled.
ZL501 = AND(ZL499, N1ZL499)	--	Required to track if the SCS-8L is in Auto; Must use the next logic zone address after the MSCS Control Zone of the secondary NCA-2.
N1ZL500	Primary SCS Active	N1ZL500 identifies the MSCS Control Zone of the primary NCA-2.

Smoke Control - New Programming Features of v.21

- ❖ Zone Precedence (NFS2-3030 only)

The screenshot displays the System Programming software interface for an NFS2-3030 node. The left sidebar shows the node filter set to 'All' and a tree view of nodes under 'APPLE MASTER 2017-08-07 (V1.0)', including N1 through N9, Node Group 10, and N11. The main window has tabs for 'System Programming' and 'General Zones', with 'General Zones' selected. The title bar indicates 'Node: 11 (NFS2-3030)'. Below the title bar are various toolbar icons for filtering, searching, and exporting data. The central area is a grid table with the following data:

Local Zone	Non-Reset Control	Silenceable	Precedence Participation	Description
0	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	General Alarm
1	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	E9-A1-E1 Manual On
2	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	A2 Manual On
3	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	A3 Manual On
4	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	A4 Manual On

Smoke Control - Programming Zoned SC (Example 1)

- ❖ The following would represent a 3-zone system where only one zone could be in Exhaust mode at a time automatically.
- ❖ The Logical Players:
 - **Automatic**
 - ❖ AUTOMATIC EXH Z1 - (N1Z100)
 - ❖ AUTOMATIC EXH Z2 - (N1Z200)
 - ❖ AUTOMATIC EXH Z3 - (N1Z300)
 - **Manual**
 - ❖ MANUAL EXH Z1 - (N1Z1=ON, N1Z11=OFF)
 - ❖ MANUAL EXH Z2 - (N1Z2=ON, N1Z12=OFF)
 - ❖ MANUAL EXH Z3 - (N1Z3=ON, N1Z13=OFF)
 - ❖ MANUAL PRESS Z1 - (N1Z21=ON, N1Z31=OFF)
 - ❖ MANUAL PRESS Z2 – (N1Z22=ON, N1Z32=OFF)
 - ❖ MANUAL PRESS Z3 – (N1Z23=ON, N1Z33=OFF)

*DON'T FORGET PRECEDENCE MODE AND NON-RESET

Smoke Control - Programming Zones SC (Example 1)

❖ LOCKOUT ZL IN A SEPARATE NODE

- $N2ZL200 = OR(N1ZL101, N1ZL102, N1ZL103^*)$

* INCLUDE ALL ZONES WHICH WILL REQUIRE LOCKOUT ONCE ACTIVATED

Smoke Control - Programming Zones SC (Example 1)

- ❖ WRITE ONE ZL FOR AUTOMATIC OPERATION FOR EACH ZONE FOR PRESSURIZE AND EXHAUST MODES
- ❖ EXHAUST ON EQUATIONS (ONLY ONE ZONE ALLOWED TO EXHAUST AT ANY GIVEN TIME)
 - $N1ZL101 = OR(AND(OR(AND(Z100, NOT(N2ZL200)), ZL101), NOT(Z11), NOT(Z21), NOT(ZF14)), Z1")$
 - $N1ZL102 = OR(AND(OR(AND(Z200, NOT(N2ZL200)), ZL102), NOT(Z12), NOT(Z22), NOT(ZF14)), Z2")$
 - $N1ZL103 = OR(AND(OR(AND(Z300, NOT(N2ZL200)), ZL103), NOT(Z13), NOT(Z23), NOT(ZF14)), Z3")$

Smoke Control - Programming Zones SC (Example 1)

- ❖ WRITE **ONE** ZL FOR AUTOMATIC OPERATION FOR EACH ZONE FOR PRESSURIZE AND EXHAUST MODES
- ❖ EXHAUST ON EQUATIONS (ONLY ONE ZONE ALLOWED TO EXHAUST AT ANY GIVEN TIME)
 - N1ZL101 = OR(AND(OR(AND("AUTOMATIC EXH Z1", NOT("LOCKOUT ZL FROM A SEPARATE NODE")), "ZL101"), NOT("MANUAL EXH OFF Z1"), NOT("MANUAL PRESS Z1"), NOT(ZF14)), "MANUAL EXH Z1") -- Note: ZF14 = PANEL RESET--
 - N1ZL102 = OR(AND(OR(AND("AUTOMATIC EXH Z2", NOT("LOCKOUT ZL FROM A SEPARATE NODE")), "ZL102"), NOT("MANUAL EXH OFF Z2"), NOT("MANUAL PRESS Z2"), NOT(ZF14)), "MANUAL EXH Z2")
 - N1ZL103 = OR(AND(OR(AND("AUTOMATIC EXH Z3", NOT("LOCKOUT ZL FROM A SEPARATE NODE")), "ZL103"), NOT("MANUAL EXH OFF Z3"), NOT("MANUAL PRESS Z3"), NOT(ZF14)), "MANUAL EXH Z3")

Smoke Control - Programming Zones SC (Example 1)

- ❖ PRESSURIZE ON EQUATIONS (IF ALL ZONES PRESSURIZE WHEN THEY ARE NOT IN EXHAUST MODE)
 - N1ZL111 = AND(OR(ZL102,ZL103,"MANUAL PRESS Z1"),NOT("MANUAL EXH Z1"))
 - N1ZL112 = AND(OR(ZL101,ZL103,"MANUAL PRESS Z2"),NOT("MANUAL EXH Z2"))
 - N1ZL113 = AND(OR(ZL101,ZL102,"MANUAL PRESS Z3"),NOT("MANUAL EXH Z3"))
- ❖ PRESSURIZE ON EQUATIONS (IF ONLY ZONES ABOVE AND BELOW PRESSURIZE)
 - N1ZL111 = AND(OR(ZL102,"MANUAL PRESS Z1"),NOT("MANUAL EXH Z1"))
 - N1ZL112 = AND(OR(ZL101,ZL103,"MANUAL PRESS Z2"),NOT("MANUAL EXH Z2"))
 - N1ZL113 = AND(OR(ZL102,"MANUAL PRESS Z3"),NOT("MANUAL EXH Z3"))

* The zone will not clear after being switched “on” by simply returning the switch to normal. The panel must be reset or the switch moved to the “off” position to clear the zone.

Each output ZL used must reference the above core Logic Zones in order to have a single point of reference and avoid circular logic.

Smoke Control - Programming – Zones SC (Example 1)

❖ PRESSURIZE ON EQUATIONS (IF ALL ZONES PRESSURIZE WHEN THEY ARE NOT IN EXHAUST MODE)

- $N1ZL111 = \text{AND}(\text{OR}(ZL102, ZL103, Z21), \text{NOT}(Z1))$
- $N1ZL112 = \text{AND}(\text{OR}(ZL101, ZL103, Z22), \text{NOT}(Z2))$
- $N1ZL113 = \text{AND}(\text{OR}(ZL101, ZL102, Z23), \text{NOT}(Z3))$

❖ PRESSURIZE ON EQUATIONS (IF ONLY ZONES ABOVE AND BELOW PRESSURIZE)

- $N1ZL111 = \text{AND}(\text{OR}(ZL102, Z21), \text{NOT}(Z1))$
- $N1ZL112 = \text{AND}(\text{OR}(ZL101, ZL103, Z22), \text{NOT}(Z2))$
- $N1ZL113 = \text{AND}(\text{OR}(ZL102), \text{NOT}(Z3))$

* The zone will not clear after being switched “on” by simply returning the switch to normal. The panel must be reset or the switch moved to the “off” position to clear the zone.

Each output ZL used must reference the above core Logic Zones in order to have a single point of reference and avoid circular logic.

Smoke Control - Programming – Zones SC (Example 2)

❖ Example 2

- 9 Office Pods (Open office space) – A areas
 - ❖ 6 sub-zones (w/ independent automatic operation)
 - ❖ Sub-zones do not lock out others in same Pod
 - ❖ No subsequent alarms are to reconfigure the system
 - ❖ Once a Pod is active, all subsequent alarms (from other areas) are locked out
 - ❖ Manual switch controls all sub-zones as 1 smoke zone (SZ)
- 9 Entry/Exit Atriums – E areas
 - ❖ Atrium smoke exhausted through use of shared fans in Office Pods
 - ❖ Manual activation of an E area overrides a manual activation of an A area for only the shared equipment
- Honeywell FSG engaged for Proof-of-Concept (POC)

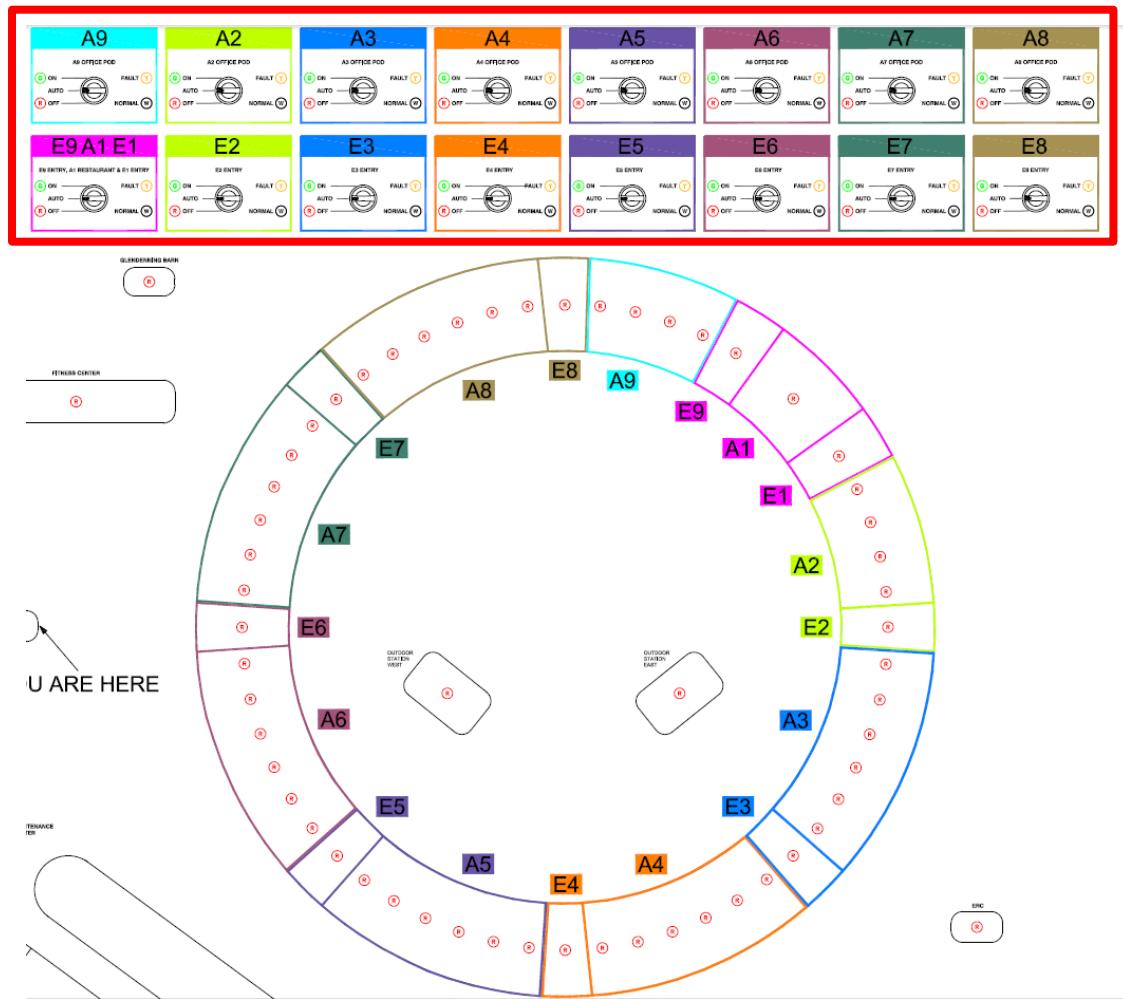

Smoke Control - Programming – Zones SC (Example 2)

❖ 16 Switches

- $16 / 8 = 2$ Cards
- $2 / 2 = 1$ SCS-8L
- $2 - 1 = 1$ SCE-8L

❖ 64 LEDs

- $64 - (16 \times 2) = 32$ LEDs
- $32 / 32 = 1$ LDM-32
- $1 - 1 = 0$ LDM-E32

Smoke Control - Programming – Zones SC (Example 2)

- ❖ Step 1 – Established Manual Control Zones
 - Map Annunciator points to NFS2-3030 General Zones

SCS-Group #	General Zone	Smoke Zone	Template Information
SCS1 Group 1	N11Z009	A9	<A9 Manual On>
